

What is it?

The CSA devXperience leverages an experiential model that immerses teachers in an interactive experience designed to help teachers understand how to integrate computer science in their core curriculum.

Who is it for?

The CSA devXperience is for all K-5 teachers. Harnessing the intrigue of computing, it has been delivered to teachers of all experience levels.

What do you get?

Teachers work through an intense, strategically designed 2-day unit that helps them learn the fundamentals of computer science through coding, and develops a level of confidence necessary to embed CS in the classroom. Also, every participant receives one free Makey Makey Classic!

What is the value?

Not only do teachers leave with a ready to implement lesson plan, the devXperience is also strategically designed to identify key factors so that teachers can rework their other lessons to incorporate this evidence-based teaching strategy throughout their curriculum.
